

# Re-think Your Drink Packaging & ALWAYS Recycle!

Did you know almost 70% of what people drink these days comes in a package?

Nearly all drink containers are easily recyclable, yet 10 million tons were not recycled last year. And despite what some people hear about bottled water containers filling up landfills, PET bottled water containers make up only a small percent of all drink packaging that isn't recycled. Here's a look at the environmental impact of the eight most common drink packages.

**HDPE**  
Common containers: Nalgene, juice, milk & water jugs.

## The 8 most common DRINK packages

(in order of overall environmental impact, from most to least\*)

**Legend**

- BTUs / container - BTUs are British Thermal Units, a unit for measuring energy use. Figures show how many BTUs are used to make one container – averaged from all sizes within container type.
- Metric Tons of CO<sup>2</sup> equivalent /1,000,000 containers - The amount of greenhouse gases emitted by producing 1,000,000 containers.
- Percentage of packaging "landfilled" instead of recycled. Not all beverage packaging is recyclable.
- Packaging weight in grams (average weight for a single serve container).
